

Eaton IZM NES Air Circuit Breaker Package Replacement

Dear customer.

In order to better ensure the Eaton ACB product packaging intact during transportation, Eaton decided to replace the wooden packaging crate with cardboard box packaging for the IZM NES series breaker and added protection filler inside the box. The new packaging has passed the specified tests by International Safe Transit Association (ISTA), and will be put into use in the beginning of June.P

After substantial evaluation and testing, we are confident that the new packing can provide higher strength and stronger protection than the original wooden one.

The physical dimensions of the new packaging are consistent with the original wooden box, except the width is increased by 3cm and height is increased by 4cm. The recommended stacking layer remains unchanged at two.

If you have any further question, please contact your Eaton sales representative or distributors.
